Characteristics

> Mullite (3 Al₂O₃ – 2 SiO₂) is a material known for offering key benefits such as:

- · High strength and toughness
- Thermal shock resistance
- Low thermal expansion
- Low thermal conductivity
- Lightweight (compared to other ceramics)
- Electrical insulation
- Refractoriness
- · Good chemical stability
- Good dielectric transparency

To further enhance these advantages, Baikowski® has been developping high phasic purity mullites, available in slurries and spray-dried powders, that feature:

• Specific surface area (SSA): 35 m²/g

• Particle size: <0.2 μm

COATING

Applications

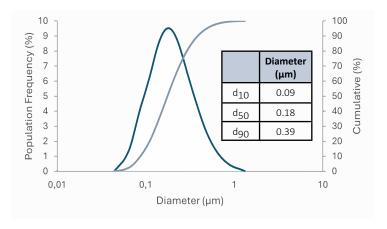

> Baikowski®can design tailored mullite solutions, specifically incorporating nano-zirconia doping, to meet the requirements of advanced applications.

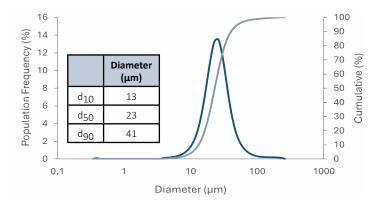

Slurry - 50 wt% - pH 8.5 - PSD (Horiba)

Spray dried powder - PSD (Horiba – dry way)

Any particular process issue? Let us know your requirements and we will design, together, the best solution for your needs.
